

# *About our FRP Booms and Jibs*

## *Waco Boom Company Ltd.*

---

The epoxy FRP booms and jibs manufactured today at Waco Boom are the strongest and most consistent FRP booms we have ever made. Waco Boom has made continuous improvements in our booms and jibs to address the needs of our aerial lift customers worldwide.

Others have tried to copy our revolutionary molded epoxy filament winding process.

- No one can match our experience in filament wound FRP booms and jibs.
- No one can match our focus on FRP boom improvement.
- No one can match our dedication to making insulated FRP booms that are recognized as the industry standard.

Waco Boom is the industry leader in testing and development of FRP booms and insulated jibs. Information gathered from testing our booms and booms made by every other process, along with input from the insulated aerial device industry is utilized in our new designs. Today, everyone expects more for their money. So, we must continue to develop and test stronger booms while keeping costs low.
